

October 2020 Update News

IFFO's monthly newsletter

Editorial

Getting more food from the sea seems increasingly sensible: the dietary profile and carbon footprint of seafood is better than livestock production's, not mentioning biodiversity loss resulting from deforestation. *The Future of Food from the Sea*, a paper recently published in Nature, provided an economic roadmap for sustainable ocean food production to meet food requirements. [...]

Farmed salmon has a bright future

The global farmed salmon industry developed at an experimental stage in the 1960s and became an industry later, in the 1980s and 1990s. Today, the carbon footprint of farmed salmon is 0.60 whereas chicken's is 0.88, pork's is 1.30 and beef's is 5.92.
